

CSS Display Property

September 24, 2020

Display property

block; inline; inline-block; none

Block

takes up the whole width

span element

to select one part of an element. they are like divs; so without css they make no difference. span is an inline display element.

Block

p - div - h1 to h6 - table - lists

inline

span - image - anchor

TIP

inline elements can't have their width set up

inline-block

can be set on width, and be inline at the same time

none

the element will be completely removed

TIP

visibility: hidden; will make them disappear. but they will be taking their space anyway
