Classes vs. Ids

September 22, 2020

TIP

Id and Class have higher priority than tag selector

TIP

Id should be uniquei in each page. But class can be redundant.

TIP

Any html element can have more than 1 class, but only 1 id
class="class1 class2" class2 > class1

TIP

Ids are better not to use

are css properties that start with : . The most often usage is in :hover

psuedo class
